246

- enhanceosomes, 248–249, 250f
 - Mediator coactivator complex, 257–258, 259f
 - numbers and function, 243–244
 - response to environmental stress, 245–246
 - in stem cells, 249
 - TBP–DNA–TFIIB structure, 258, 260
 - TFIID and TAFs, 255–257
 - yeast structure determination through crystallography, 260–263
 - blocking in eukaryotic cells
 - direct-acting repressor proteins, 282–283, 284f
 - inhibition of the action of a DNA-bound activator, 283, 285
 - transcriptional inhibition by chromatin-modifying factors, 285–288
 - field discoveries, 235–236
 - initiation regulation of pre-mRNA
 - enhancers and discovery of transcriptional activator proteins, 242–243
 - locating promoters, 239–242
 - Transcription activation domain (TAD), 244
 - Transcription start site (TSS), 235, 281–282, 292, 294–295
 - Transesterification, 205
 - Transforming principle
 - characterization of pneumococcal extracts, 42–44
 - identification of transformation, 41–42
 - obstacles to acceptance of DNA as the active agent, 46–47
 - purification of deoxyribonuclease, 46
 - researchers' awareness of importance of their discovery, 44–46
 - support of DNA as genetic material by Chargaff, 47–49
 - Transforming Principle, The*, 47
 - tRNA
 - amino acid–activating enzymes discovery and, 73–75
 - processing of tRNA precursors to tRNA, 166, 168
 - reading of the mRNA code
 - process of information transfer, 118, 120f
 - tRNA's anticodon loop, 116, 117f
 - “wobble” hypothesis, 118, 119f
 - splicing of pre-tRNA, 207
 - start codon AUG and initiator, 115
 - Trypsin, 23
 - Tschermak-Seysenegg, Erich, 33
 - TSS (transcription start site), 235, 281–282, 294–295
 - Tuppy, Hans, 28
 - Turner, Chris, 265
 - Turnip yellow mosaic (TYM), 64
- U**
- Unfolded protein complexes, 245
 - Uracil, 31
 - Urease, 22, 60
 - UV transcription mapping, 190–192
- V**
- Vermillion*, 38–39
 - Verrucomicrobia, 380
 - Vinograd, Jerome, 90
 - Vogt, Marguerite, 151
 - Volkin, Elliot, 64, 66, 76, 91, 152
 - von Ehrenstein, Gunter, 116
- W**
- Waddington, C.H., 289
 - Wagner, Ed, 169
 - Warner, Jonathan, 158, 163
 - Watson, James D., 2
 - mRNA existence contributions, 89
 - pre-double-helix work, 13, 49, 50
 - structure of DNA and, 57
 - Weber, Jeffrey, 189
 - Wecker, Eberhard, 153
 - Wei, Cha-Mer, 178

Weil, Tony, 212
Weiss, Sam, 123
Weissman, August, 33
Weissman, Sherman, 370
Weller, Thomas, 146
Westphal, Heiner, 196
White, Ray, 193
Widnell, C.C., 218
Wieschaus, Eric, 246
Wild, Martha, 204
Wilkins, Maurice, 51
Willard, Huntington, 325
Williams, Robley, 62
Willstätter, Richard, 23
Wilson, Edmund B., 31–32, 34
Wilson, Michael, 189
Witkowski, J.A., 144
“Wobble” hypothesis, 118, 119f
Woese, Carl, 7, 352, 369–371, 377,
381, 386

Wollman, Elie, 40, 79, 82, 83
Wrinch, Dorothy, 24–25

X

X-Inactivation center (*Xic*), 325
X-Inactivation RNA (*Xist*), 324–325
X-Ray sensitivity of cells, 150

Y

Yanofsky, Charles, 130
Yeast nucleic acid, 31
Young, Richard, 257

Z

z^+ gene, 84–86, 87
Zamecnik, Paul, 5, 69, 73
Zaug, Arthur, 205
Ziff, Ed, 189, 212
Zymase, 22
